

Enerpac Product Announcement

New DuroTech Series Air Driven Power Unit for High-Use Applications

Enerpac introduces its new, durable air-driven power unit technology built for high-cycle industrial applications. The DuroTech™-Series is well-suited for use in production applications offering a durable dual ram pump with a steel reservoir and protective steel shroud.

DuroTech pumps have a long-life and are fully serviceable. The dual ram pump action offers high-oil capacity and automatic pressure control. Additionally, it requires no air lubrication, runs cool, and has reduced noise levels. One key feature to this product is the reciprocating, dual ram piston pump. Every time the piston moves it creates flow, meaning less reciprocating versus single ram systems for more flow and longer life.

Key features include:

- Extremely durable pump element
- Four-station DO3 manifold with cover plates for unused stations
- Air filter/regulator with built-in air pressure gauge
- 1.8-gallon all metal reservoir with easy-access drain plug
- Easy-to-read oil level sight glass

Product Specifications:

Industrial, high-cycle, high-flow hydraulic supply in an economical air-powered unit

- Heavy-duty construction, including steel reservoir and protective steel shroud
- Long-life, fully serviceable air motor
- Dual pump action offers high oil capacity and smooth flow
- On-demand stall / restart operation automatically maintains system pressure
- Adjustable hydraulic pressure through built-in air filter / regulator
- Requires no air lubrication
- Reduced noise level (75dBA)
- Standard four-station DO3 manifold

Workholding Tools

Powerful Clamping and Positioning Force

A full range of well-designed, workholding tools used to provide powerful clamping and positioning force to every type of manufacturing process. Global distribution yet local technical support ensure that your application needs to be solved successfully. Exclusive workholding cylinder series used for punching and clamping in automotive manufacturing. A wide selection of high-performance hydraulic power units bring innovation and reliability to your project challenges.
