

Electronic Service Tag

No more guesswork when replacing your cylinder.

Milwaukee Cylinder provides an EST (Electronic Service Tag™) on every H, MH, LH and A-series cylinder that gives you access to every piece of information your maintenance team will need to service or replace your cylinder.

Placing one of these QR Code/NFC tags on or near your cylinder allows your cell phone to be used to access name plate information about your specific cylinder, obtain a quote for that cylinder's seal kit or even quoting a duplicate cylinder.

- **Reduce pain of finding what cylinder you have (which is necessary to order service parts)**
- **Reduce downtime by quick access to the correct service part**
- **Use any modern phone to read cylinder nameplate information and understand what service parts to order**
- **Includes easy electronic push-button from phone to quote service parts to your email in one business day**
- **Works in industrial environments: NFC can read tag, even if the tag is dirty or ink unreadable**
- **Easily placed in various accessible locations (On cylinder, machine and nameplate, or in machine's manual)**

Apply tag (sticker) to a location accessible by a cell phone. (i.e. on the cylinder, a separate name plate, binder, control box, etc.) Apply on surfaces with a min/max temperature of -31oF to +194oF

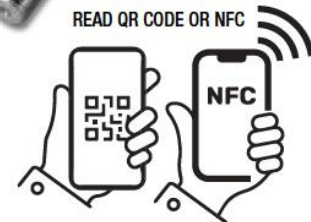

How to Use: Use your phone's QR code or NFC reader to scan the tag. Your phone will link to your cylinder's information at Milwaukee Cylinder. Use convenient push button features to quote a seal kit or duplicate cylinder.

QR Code - comes standard on any smart phone by scanning with its camera.

NFC Technology - comes standard on most smart phones — simply touch the tag with your phone.

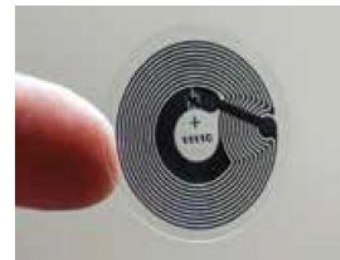

Place on or near cylinder

Find all the info you've long since forgotten

Milwaukee cylinders last for years and years, quietly performing for your business, but when the time comes when you actually need to service one, your maintenance team may be entirely new and the information you thought you had could be hard to find, or worse, long since lost.

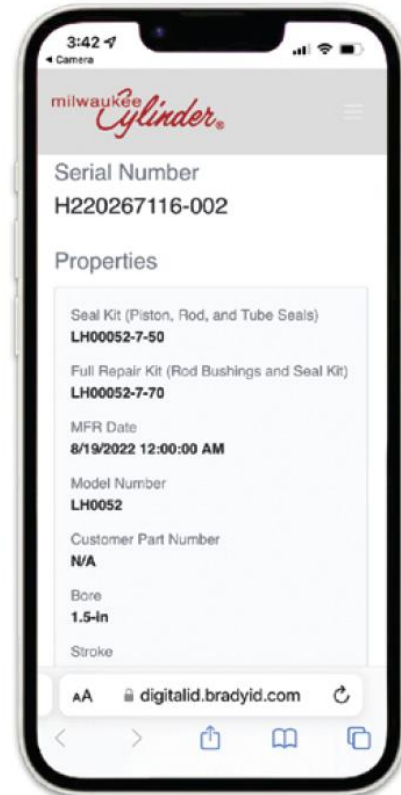

With out QR Code/NFC Chip reader, you'll have instant access to every piece of information that you'll need.

That's what you'd expect from an industry leader.
