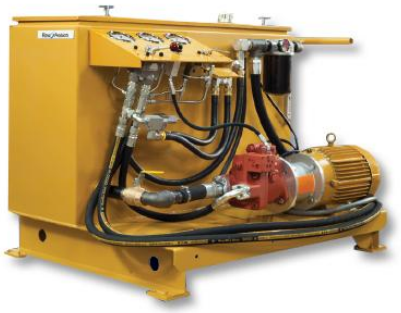
Flow Products

FLUID POWER SYSTEMS
INSPECTION & REPAIR SERVICES

PROVIDING MARKET LEADING CUSTOMER SERVICE AND TECHNICAL SUPPORT



Our experienced customer service team and sales engineers pride themselves in their ability to meet your needs. We continue to offer new and innovative services designed to mitigate risk and improve production up time.

Our IFSP (International Fluid Power Society) certified fluid power specialists can provide system designs, troubleshooting, inspection, diagnostics and repair of hydraulic and pneumatic systems.

The programs we offer have been developed to provide key preventative hydraulic needs in order to improve uptime and maximize productivity at your facility.

- **Fast inspection and repair service quote turn around**
- **System start-up and commissioning**
- **Product and system technical training**
- **System troubleshooting**
- **Diagnostics**
- **Preventative maintenance programs**

HYDRAULIC HOSE INSPECTION

One of the major causes of failure in a hydraulic system is the hose. Generally, there is little to no attention given to hydraulic systems and damage and wear go unnoticed for extended periods, resulting in unexpected downtime.

HYDRAULIC & PNEUMATIC COMPONENTS REPAIR

Our team of fluid power specialists are trained to troubleshoot and identify component problems. We can rebuild your damaged components or recommend replacements. The process involves a thorough understanding of the proven, and complete disassembly and inspection of the component and a detailed proposal with a recommendation.

FILTER SYSTEM INSPECTION

Hydraulic filters are used to provide a contaminant free source of oil. This is essential for proper performant and service life of all the hydraulic components such as the metering valves, check valves, solenoid valves, valve manifold assemblies, motors and pumps.
