Ashay Mehta
January 31, 2022

Ashay graduated from the University of Illinois at Chicago in May 2021 with a degree in Mechanical engineering. He specializes in 3d modeling and drawing and will be responsible for designing hydraulic systems, configurations, fabrications drawings. His major school project goal was to modify a previously existing ice maker that would accept cartridges that form different ice shapes such as spheres, football shapes, and diamonds automatically. With his successful design, and a working prototype, Ashay was awarded "Best in Autonomous Product Development" certificate by the department of engineering at UIC

Ashay spends his free time playing basketball at his local recreation center and tries to hike as much as possible on the weekends. He recently picked up a new hobby of collecting rare sports trading cards as he hopes to build his collection of autographed Chicago Bulls memorabilia.
