

All-in-One ServoStep Motors with Safe-Torque-Off TÜV-approved for Safety integrity level 3

JVL
intelligent motors

MIS171-MIS176 ServoStep are NEMA17 programmable integrated ServoStep motors with closed-loop, Ethernet, multiturn encoder.

With **speeds up to 3000RPM**, it offers the **highest microstepping resolution, position/velocity/torque servo-performance up to 0.8Nm**. Different shaft diameter, brakes and high IP protection make it ideal for machine adjustment or other demanding applications.

CANopen for the ServoStep™ New firmware includes DSP 402 and Synchronization

The MIS motor range MIS17/23/34/43 and Stepper Motor Controller SMC66/85 now have a completely new firmware update including DSP402 where sync, interpolated position mode is supported.

- All motor functions available in CANopen through DS301 gateway objects
- Easy configuration and test of SDO and PDO from PC through JVL CANexplorer.
- DSP402 with Profile Position Mode, Velocity Mode, Homing Mode, and Interpolated Position Mode.
- TwinCAT 3 compatible

Electric Actuators and Linear Movements

New Integrated Spindle Drives with Absolute Multi-Turn Encoder

JVL offers two solutions for linear movements both with ServoStep motor.

One is a piston style electric actuator perfect for replacing pneumatic actuators.

The other is an open spindle type for when you want to design your own guides. It is available with either a plastic nut for low duty cycle or a rolled ball screw for fast and precise movements.

Available types:

- Electric actuator with piston (captive)
- Open spindle with external POM nut
- Open with rolled ball screw
