Instruments

Excellence Since 1953

With warmer temperatures returning, it's the perfect time to start thinking about HVAC maintenance. Getting your system checked in the spring helps ensure everything is running efficiently before the next heating season, and can prevent costly issues down the line. One simple way to streamline maintenance is by upgrading to a Winters tridicator.

Tridicators like Winters' **TTD Series Tridicator** simplify maintenance and cost by combining highly-precise pressure and temperature measurement into a single, easy-to-use device. The TTD in particular is ideal for use in boiler assemblies with high volumes of hot water and steam.

Available with both 2.5" (63mm) and 3" (75mm) dial faces, the TTD offers dual scale temperature measurement (°F & °C) and options for 1" (25mm), 2" (50mm) and 2.5" (63mm) stems. The TTD can be customized with multiple temperature and pressure ranges - all of which are compliant with ASME Boiler Code Section IV HG-612 industry standards.

We also offer the **TST Tridicator Shut-Off Thermowell** as an accessory, which features a spring-loaded design that allows it to stay open when the tridicator is installed and automatically closes upon removal. This design minimizes system downtime with quick instrument replacement, while preventing media from exiting the system. The thermowell is CRN registered, has a pressure rating of up to 250 psi (matching the TTD Tridicator), and comes with a 5-year warranty.
